Frequently Asked Questions (FAQ)

- General
- Cloud
- Infrastructure
- Network
- Observability
- Digital experience (website/RUM/synthetic monitoring)
- For managed service providers (MSPs)

1. Monitoring locations: What are they, and can I choose which ones to use?

Monitoring locations are geographically dispersed servers from which the service monitors your website/domains. These distributed checkpoints constantly monitor your resources, providing valuable insights into their performance.

You can choose from any of the more than 130+ monitoring locations that we provide. However, there are restrictions on the monitoring locations based on the plan you select. If you need to monitor from all 130+ locations, please contact our sales for a customized plan.

2. What is primary and secondary monitoring locations?

3. How can I monitor transactions from 25 locations?

4. What monitors are included in the WebPerf pricing plan?

5. What monitors are included in the WebUptime pricing plan?

6. Do we provide run-based and monitor-based pricing?

7. What is the lowest polling frequency supported for monitoring?

8. What is a Synthetic Run? Which types of monitors require a Synthetic Run license?

9. What is the difference between Advanced monitor and Synthetic Run licensing?

10. Which monitor supports browser-based simulation, and how is it priced?

11. What is RCA? What is included in various plans?

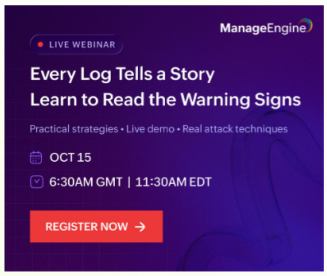

12. How does RUM licensing work?
