Try our free forever plan : Monitor the uptime of up to 50 resources. | Receive instant downtime email alerts

# Expand your monitoring coverage with add-ons

(You can buy multiple units of each add-on)

Lite plan add-ons
(Rates per month)

**Basic monitors**
- 10 Monitors: ₹950

**Host monitors**
- 10 Monitors: ₹2,375

**Advanced monitors**
- 2 Monitors: ₹1,425

**Network components**
- 10 Components: ₹1,045

**RUM page views**
- 500K Page views: ₹2,375

**Logs** 7 Days
- 10 GB Logs 7 days index: ₹285

** The Lite plan comes with a fixed set of add-ons. For additional usage, we recommend upgrading to the Professional plan.*

Professional plan add-ons
(Rates per month)

**Basic monitors**
- 10 Monitors: ₹950
- 500 Monitors: ₹42,750

**Host monitors**
- 10 Monitors: ₹2,375
- 500 Monitors: ₹1,04,500

**Advanced monitors**
- 25 Monitors: ₹15,200
- 100 Monitors:₹57,000

**Network components**
- 10 Components: ₹1,045
- 500 Components: ₹44,460

**RUM page views**
- 500K Page views: ₹2,375
- 10M Page views: ₹28,500

**Logs** 7 Days
- 10 GB Logs 7 days index: ₹285
- 1 TB Logs 7 days index: ₹18,525

**Synthetic runs**
- 10000 Synthetic runs: ₹760
- 1M Synthetic runs: ₹64,600

**Hourly pricing**
- Virtual cloud servers: ₹0.570/hr
- Application instances: ₹2.660/hr

# Frequently Asked Questions (FAQ)

- General
- Cloud
- Infrastructure
- Network
- Observability
- Digital experience (website/RUM/synthetic monitoring)
- For managed service providers (MSPs)

**1. How does licensing for servers work? Does monitoring individual resources within a server cost extra?**

Each host operating system (virtual or physical) being monitored counts as one server and consumes one host monitor license.

By default, you can track up to 25 key resources running in the server including like processes, services, and resource usage within each server. If you need to monitor more than 25 resources on a single server, those additional checks will tap into your basic monitor licenses.

**2. What is agent-based and agentless monitoring? How will it be licensed?**

**3. What are plugins, and where can they be used?**

**4. Are there any limitations on the number of plugins I can add to a server monitor?**

**5. How do you monitor processes/services running in a host? Is it licensed separately?**

**6. How are Docker and Kubernetes monitoring licensed?**

**7. How do you define a database host? What are the types of databases you support?**

**8. How does database licensing work?**

**9. How do you monitor Cloud VMs? How are they licensed?**

**10. How does licensing work for VMware infrastructure monitoring?**

**11. What are "Infrastructure Events" and why are they included as part of infrastructure monitoring? How are they licensed?**

# All-in-one monitoring solution
